Over the past decade, we have witnessed an apparent convergence of views among competition agency officials in the European Union and the United States on the appropriate goals of competition law enforcement. Antitrust policy, it is now suggested, should focus on enhancing economic efficiency, which we are to believe will promote consumer welfare. Recent EU Commission Guidelines on the application of Article 101 TFEU appear to banish considerations that cannot be construed as having an economic efficiency value – such as the environment, cultural policy, employment, public health, and consumer protection – from the application of Article 101 TFEU. Arguing that the professed adoption of an exclusive efficiency approach to Article 101 TFEU does not preclude, but rather obfuscates the role of non-efficiency considerations, the author of this timely contribution accomplishes the following objectives: traces the genesis of the shift to an efficiency orientation in EU and US antitrust policy and dispels several ingrained misconceptions that underpin it; demonstrates the close interrelationship between evolving images of the purpose of antitrust, the development of related enforcement norms, and enforcement output; provides in-depth analyses of a number of analytically rich cases in the audiovisual sector (and particularly those related to sports rights); and explores what the role of non-efficiency considerations in the application of Article 101 TFEU could and should be under the modernized enforcement regime.
In the spring of 1949 Warren Hearst can no longer play shortstop or ride his bike. The polio epidemic has claimed his body. Bundled in a blanket in the back of the family Chevy "Woody" station wagon, Warren rolls along Highway 30 toward Omaha and hospitalization. He will be a miserable "crip." He plans to run away. But the plan is dashed when he meets Whitey, that pushy little twerp across the street in the new, unfamiliar neighborhood. Out of the hospital, and sporting a leg brace and a crutch, Warren finds himself bumping along in Whitey's coaster wagon. Their destination is the old Woodard farm where a legendary, weathered tree house has been waiting to welcome yet another troubled child. The story begins when Warren and Whitey, life long friends and now in their sixties, are sitting face to face in a breakfast booth with sketchy plans drawn on a grease spotted placemat. It will be midnight when Whitey's pickup will bounce through the fields of the now deserted Woodard farm. The tree house will be dismantled and rebuilt in an old tree in Warren's back yard. Another special child will climb the ladder, because the planet Venus will be positioned just right in the glowing sunset of the western sky.

The economic analysis of legal and regulatory issues need not be limited to the neoclassical economic approach. The expert contributors to this work employ a variety of heterodox legal-economic theories to address a broad range of legal issues. They demonstrate how these various approaches can lead to very different conclusions concerning the role of the law and legal intervention in a wide array of contexts. The schools of thought and methodologies represented here include institutional economics, new institutional economics, socio-economics, social economics, behavioral economics, game theory, feminist economics, Rawlsian economics, radical economics, Austrian economics, and personalist economics. The legal and regulatory issues examined include anti-trust and competition, corporate governance, the environment and natural resources, land use and property rights, unions and collective bargaining, welfare benefits, work-time regulation and standards, sexual harassment in the workplace, obligations of employers and employees to each other, crime, torts, and even the structure of government. Each contributor brings a different emphasis and provides thoughtful, sometimes provocative
analysis and conclusions. Together, these heterodox insights will provide valuable supplementary reading for courses in law and economics as well as public policy and business courses at both the graduate and undergraduate levels.

Here is the new, completely updated and expanded edition of the indispensable handbook used throughout the hospitality industry since The Laws of Innkeepers first appeared in 1972. Containing all the legal information essential to the successful operation of modern hotels, motels, inns, bed-and-breakfasts, clubs, restaurants, and resorts, the book has been extensively revised by John E. H. Sherry to accommodate the far-reaching changes that have occurred since the publication of the revised edition in 1981. Sherry, a practicing lawyer and professor of hotel administration, carries over from the highly praised earlier editions detailed information on the rights and responsibilities of host and guest alike. He cites actual cases—ranging from the amusing and the bizarre to the tragic—as examples, and spells out in precise and readily understandable terms exactly what state and federal law says. Broadening the scope of the book to keep up with recent legal developments, the author includes many new case decisions and summaries from various jurisdictions. Three chapters devoted to employment law, environmental law and land use, and catastrophic risk liability are among the highlights of the new material. These new sections present recent rulings and case law on such timely topics as age, disability, and AIDS discrimination, as well as sexual harassment; government regulation of toxic and hazardous substances and hotel and resort development; and acts of God and the Public Enemy and terrorism.

In the late 1930s, the German-American Bund, led by its popinjay dictator Fritz Kuhn, was a small but powerful national movement in pre-World War II America, determined to conquer the United States government with a fascist dictatorship. They met in private social halls and beer garden backrooms, gathered at private resorts and public rallies, developed their own version of the SS and Hitler Youth, published a national newspaper and—for a brief moment of their own imagined glory—seemed poised to make an impact on American politics. But while the American Nazi leadership dreamed of their Swastika Nation, an amalgamation of politicians, a rising legal star, an ego-charged newspaper columnist, and denizens of the criminal underworld utilized their respective means and muscle to bring down the movement and its dreams of a United Reich States. Swastika Nation by Arnie Bernstein is a story of bad guys, good guys, and a few guys who fell
somewhere in-between. The rise and fall of Fritz Kuhn and his German-American Bund at the hands of these disparate fighters is a sometimes funny, sometimes harrowing, and always compelling story from start to finish.

Many naturally occurring compounds from foods such as rice, vegetables, fruits, and animal products possess properties that help to slow disease progression, inhibit pathophysiological mechanisms, or suppress activities of pathogenic molecules. Proteins and peptides play significant roles in such activities and are gaining importance as nutraceuticals that benefit numerous aspects of health and nutrition. Bioactive Food Proteins and Peptides: Applications in Human Health provides a human health perspective on food-derived proteins and peptides. It describes the potential for large-scale production with advances in technology and proposes challenges and opportunities for the future of health, nutrition, medicine, and the biosciences. The book begins by addressing properties related to chemistry and bioactivity. It examines proteins and peptides as allergens, antihypertensive agents, antimicrobials, antioxidants, and anticancer agents. It also discusses findings on the bioavailability and toxicity of food-derived peptides and intestinal functions. Next, the contributors present information on therapeutic peptides. They discuss recent developments in proteomics, bioavailability, and opportunities for designing future peptide-based foods. Providing a comprehensive review of bioactive proteins and peptides obtained from food sources, the book brings together the most up-to-date and essential information from eminent researchers from all over the world. Academics, food scientists and technologists, nutritionists, biochemists, persons in industry, and government researchers and regulators will find this book to be an essential resource for new data and developments.

The greatest need in the world today is for far more people to be developed enough to bring forth a world that works for all. Organizations need people who are capable of facing the challenges of an uncertain global economy; communities need people who can strengthen institutions in the places they live; societies need people with the capacity to address the urgency and complexity of the problems we face in the world today. The authors propose that the places we work must become the context for becoming more of who we are meant to be as highly aware, fully functioning human beings, at the same time that we accomplish the goals of the enterprise. The book explains what is meant by transformative work; highlights examples of where it is occurring around the world; and offers ideas about how workplaces can benefit from equally valuing and focusing on the purposes of their work, the purposes of the people who work there, and the purposes of their communities and the larger society.

Humans are often distinguished from other animals by their ability, even need, to see patterns in everyday life. As we enter a new millennium, all aspects of society seem to want to take stock of what has happened in the past and what is likely to happen in the future. The computer industry is no different from others. Advances in Computers has been published continuously since 1960 and this year's volume is the fiftieth technical volume in the series (two index volumes were published as volumes 50 and 51). Since it is the fortieth year of publication, we decided to look back on the changes that have occurred since Volume 1 of Advances in computers appeared in 1960. We looked at the six chapters of that initial volume and decided that an appropriate anniversary volume for this series would be a collection of papers on the same topics that appeared in 1960. What has happened to those technologies? Are we making the progress we thought we would or are events moving more slowly?
